

VI COLLOQUIUM OF QUALITATIVE RESEARCH IN HUMAN MOTRICITY

VI COLLOQUIUM ON QUALITATIVE RESEARCH IN HUMAN MOTRICITY: ETNOMOTRICITY OF SOUTH (English Version)

Introduction

The Colloquium on Qualitative Research in Human Motricity (CPQMH) is an academic and scientific international event organized since 2003 by the "Society of Qualitative Research in Human Motricity" (SPQMH). The first five editions were held at the Federal University of São Carlos-Brazil (UFSCar), but the idea of an itinerant event was there from the beginning. In 2015 this idea will finally materialize as the "VI Colloquium on Qualitative Research in Human Motricity: etnomotricity of south" is set to take place in the Austral University of Chile (UACH), located in Valdivia, Southern Chile.

The Colloquium focuses on relevant themes pertaining to the Science of Human Motricity (proposed by Manuel Sergio, having as main reference the work of Maurice Merleau-Ponty). The central aim of the event is to encourage the socialization of research and experiences from academics and professionals from different fields who have their studies based on qualitative methodological approaches.

Proposal

- ✓ To offer spatial and timely opportunities for the continuity of studies on Human Motricity to be developed rigorously and systematically within institutional arenas;
- ✓ To present research conducted within different institutions, opening possibilities for questioning and reflection upon those current developments;
- ✓ To contribute to a deeper dialogue that is fruitful, critical, stimulating and proposal-generating for professionals on Human Motricity, Physical Education, Education, Environmental Education, Arts, History, Sociology, Tourism and related areas;
- ✓ To emphasize, in all themes of the "VI Colloquium on Qualitative Research in Human Motricity: etnomotricity of south", the epistemologies of the South (metaphorically and geographically): "[...] as a field of epistemic challenges that seeks to repair the damage and impacts historically caused by capitalism in its colonizing relationship with the world. [...] The central idea is [...] that colonialism, in addition to all forms of domination to which it is known, was also an epistemological domination" (from "Epistemologies of the South", by Santos and Meneses, 2010, p.19). This is essential regarding wider discussions surrounding Human Motricity studies in critical dialogue with other epistemologies.
